

VertiGIS transfer portal

VertiGIS offers a platform for secure data exchange through the website <https://transfer.vertigis.com>.

To use this service, you need a personalized account, which you can request from VertiGIS Support (<https://support.vertigis.com>). You'll need to provide your first and last name, email address, and company name.

Access is secured with 2-factor authentication using a time-based one-time password (TOTP). You can generate this with an authenticator app on your smartphone (e.g., Microsoft Authenticator, Google Authenticator), a hardware device (e.g., REINER SCT Authenticator), or a desktop app if necessary. We recommend using a smartphone app or hardware device for an additional layer of security. 2-factor authentication is required for your first login.

Data on transfer.vertigis.com is stored encrypted in Germany (Open Telekom Cloud) and is scanned for viruses when uploaded. The maximum file size per file is 16 GB.

Data on the transfer server should be deleted after the recipient has successfully downloaded it. Automatic deletion occurs after 30 days (with some areas exempt from this rule)."

Further information about the VertiGIS Transfer Portal can be found [here](#).
